

I fully support RM-10352. With the ever-increasing popularity of 160 meters in addition to the technical peculiarities of the band (e.g. low signal-to-noise ratio), it only makes sense to designate a mode-specific subband. The "Gentleman's Agreement" was useful when there were a small number of users on 160 meters, but the increasing number of complaints concerning operating practices on the band show that it is time to bring the low band into sync with the rest of the HF spectrum.

Sincerely,
Joshua L Houk
